FOR IMMEDIATE RELEASE: Jefferson City, Missouri

Jefferson City - July 4th weekend, traditionally the busiest boating weekend of the year, will be quickly upon us. It's one of the few times a year that many boaters will operate at night and often results in a higher number of accidents than other summer holidays. With the 4th on Sunday this year, boaters will likely view many fireworks displays from the water. Afterwards, some boaters may feel the urge to rush home. This is the worst thing you can do. Take your time going to and from your boating destination, travel at a reasonable speed and have life jackets on. Also, prepare your equipment before you leave for the waterways by first ensuring that all navigation lights operate, fuel is topped off and battery loads are monitored. Keep an eye on your electrical usage when anchored. Avoid the temptation to run fans, sound systems and other appliances while waiting on the fireworks displays. Always remember that carbon monoxide produced from an idling engine can be life threatening if passengers are in close proximity of a boat's exhaust system.

The Water Patrol will be working extended shifts and targeting violations that create a higher risk of accident involvement. The risk of being involved in an accident cannot be completely alleviated but can be reduced if boat operators use good judgment and obey boating laws. Colonel Jerry Adams, Commissioner of the Missouri State Water Patrol, encourages all boaters to recognize that operator controlled factors such as speed, recklessness and impaired operation can be deadly combinations.

Here are a few safety tips:

1. Wear a life jacket. Approximately 80% of the victims in fatal boating accidents aren't wearing life jackets.
2. Don't drink and boat. Up to 50% of fatal boating accidents involve alcohol use.
3. Watch your speed. With increased speed comes less reaction time when confronted with near miss/hit situations.
4. Attach your emergency ignition safety switch lanyard to yourself in the event of a fall overboard. This will shut the engine off and prevent the vessel from circling back on you.
5. Avoid congested areas and don't jump wakes.
6. Keep a sharp lookout and steer well clear of other craft.
7. Don't overload your boat.
8. Know before you go. Operators should be familiar with the laws and safe boating practices prior

to getting on the water. Getting a weather forecast before leaving the dock and watching current conditions as they may develop will assist boaters in avoiding potentially dangerous situations.

9. Do not shoot fireworks or pyrotechnic devices from boats.
